Assignment-2

Assignment Date	28 September 2022
Student Name	V.DEEPIKA
Student Roll no.	510919205008
Maximum Marks	2 Marks

Question no: 1

Download the dataset

Solution:

Dataset downloaded.

1. Download the dataset: Dataset

Dataset successfully downloaded

Load the Dataset.

Solution:

2. Load the dataset.

```
[ ] import pandas as pd
import numpy as np
[ ] file=pd.read_csv("Churn_Modelling.csv")
df=pd.DataFrame(file)
    df.head()
     RowNumber CustomerId Surname CreditScore Geography Gender Age Tenure Balance NumOfProducts HasCrCard IsActiveMember EstimatedSalary Exited
    0 1 15634602 Hargrave 619 France Female 42 2 0.00 1 1 1 1 101348.88
    1 2 15647311 Hill 608 Spain Female 41 1 83807.86
                                                                                                                   112542.58
                                                                                                                                0
    2 3 15619304 Onlo 502 France Female 42 8 159660.80
3 4 15701354 Boni 699 France Female 39 1 0.00
                                                                                     3 1
                                                                                                        0 113931.57
                                                                                                                               1
                                                                                      2
                                                                                               0 0
                                                                                                                    93826.63
                                                                                                                                0
    4 5 15737888 Mitchell 850 Spain Female 43 2 125510.82
                                                                                                                    79084.10 0
[ ] df['HasCrCard'] = df['HasCrCard'].astype('category')
[ ] df['IsActiveMember'] = df['IsActiveMember'].astype('category') df['Exited'] = df['Exited'].astype('category')
[ ] df = df.drop(columns=['RowNumber', 'CustomerId', 'Surname'])
[ ] df.head()
```

	CreditScore	Geography	Gender	Age	Tenure	Balance	NumOfProducts	Hascrcard	IsActiveMember	EstimatedSalary	Exited
0	619	France	Female	42	2	0.00	1	1	1	101348.88	1
1	608	Spain	Female	41	1	83807.86	1	0	1	112542.58	0
2	502	France	Female	42	8	159660.80	3	1	0	113931.57	
3	699	France	Female	39	1	0.00	2	0	0	93826.63	C
4	850	Spain	Female	43	2	125510.82	1	1	1	79084.10	(

Perform Below Visualizations.

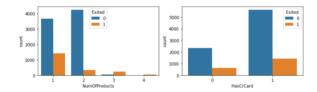

- Univariate Analysis
- Bi Variate Analysis
- Multi Variate Analysis

Solution:

• Multi - Variate Analysis

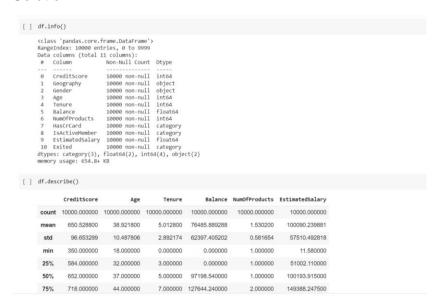

• the data is significantly imbalanced

Perform descriptive statistics on the dataset.

Solution:

Handle the Missing values.

Solution:

- 5. Handle the Missing values.

- there is no missing values in dataset

```
for i in df:
    if df[i].dtype=='object' or df[i].dtype=='category':
        print("unique of "+i+" is "+str(len(set(df[i])))+" they are "+str(set(df[i])))

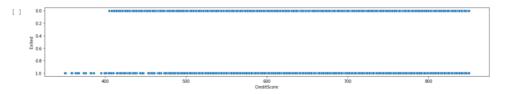

C- unique of Geography is 3 they are {'Spain', 'France', 'Germany'}
    unique of Geodrar is 2 they are {'Male', 'Female'}
    unique of Has/Crad is 2 they are [0, 1]
    unique of Isakrtard is 2 they are [0, 1]
    unique of Exited is 2 they are [0, 1]
```

Question no: 6

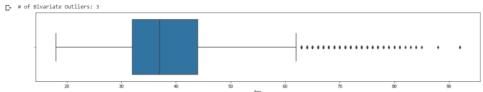

Find the outliers and replace the outliers

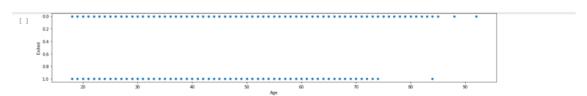

Solution:

- 6. Find the outliers and replace the outliers
- Checking for outliers

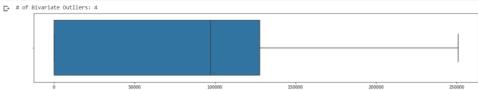

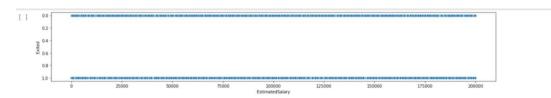

```
box_scatter(df,'Age','Exited');
plt.tight_layout()
print(f"# of Bivariate Outliers: {len(df.loc[df['Age'] > 87])}")
```

Removing outliers

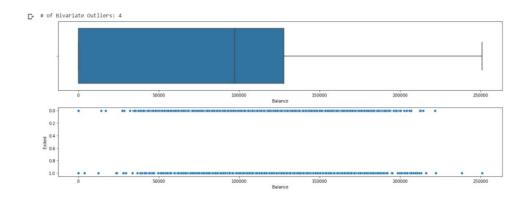

```
[] for i in df:
    if df[i].dtype=='int64' or df[i].dtypes=='float64':
        q1=df[i].quantile(0.25)
        q3=df[i].quantile(0.75)
        iqr=q3-q1
        upper=q3+1.5*iqr
        lower=q1-1.5*iqr
        df[i]=np.where(df[i] >upper, upper, df[i])
        df[i]=np.where(df[i] <lower, lower, df[i])
```

· After removing outliers, boxplot will be like

```
[ ] box_scatter(df,'Creditscore','Exited');
plt.tight_layout()
print(f'# of Bivariate Outliers: (len(df.loc[df['creditscore'] < 400]))")

# of Bivariate Outliers: 19

# of Bivariate Outliers: (len(df.loc[df['Age'] > 87]))")
```

Question no: 7

Check for Categorical columns and perform encoding.

Solution:

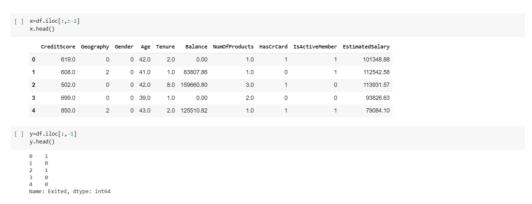

7. Check for Categorical columns and perform encoding.

```
[ ] from sklearn.preprocessing import LabelEncoder
encoder=LabelEncoder()
for i in df:
    if df[i].dtype=='object' or df[i].dtype=='category':
        df[i]=encoder.fit_transform(df[i])
```

Split the data into dependent and independent variables.

Solution:

- 8. Split the data into dependent and independent variables.

Question no: 9

Scale the independent variables

Solution:

▼ 9. Scale the independent variables

```
[ ] from sklearn.preprocessing import StandardScaler scaler=StandardScaler() x=scaler.fit_transform(x)

[ ] x

array([[-0.32687761, -0.90188624, -1.09598752, ..., 0.64609167, 0.07024255, 0.02188649], [-0.44808365, 1.51506738, -1.09598752, ..., -1.54776799, 0.07024255, 0.12653375], [-1.53865344, -0.90188624, -1.09598752, ..., 0.64609167, -1.03067011, 0.2406869], ..., 0.91241915, ..., 0.91241915, ..., -1.54776799, 0.97024255, -1.08064308], [-1.25772996, 0.30659057, 0.91241915, ..., 0.64609167, -1.03067011, -0.12523071], [-1.4648682, -0.90188624, -1.09598752, ..., 0.64609167, -1.03067011, -0.12523071], [-1.4648682, -0.90188624, -1.09598752, ..., 0.64609167, -1.03067011, -0.1253071], [-1.4648681, -0.90188624, -1.09598752, ..., 0.64609167, -1.03067011, -1.07636976]])
```

Split the data into training and testing

Solution:

•	10.	Split	the	data	into	training	and	testing
---	-----	--------------	-----	------	------	----------	-----	---------

[]	<pre>from sklearn.model_selection import train_test_split x_train,x_test,y_train,y_test*train_test_split(x,y,test_size=0.33)</pre>
[]	x_train.shape
	(6700, 10)
[]	x_test.shape
	(3300, 10)
[]	y_train.shape
	(6708,)
[]	y_test.shape
	(3300,)
	(3309)
